

Crack and crevice (C+C) application is the most effective and efficient treatment method in pest control. Applying a small amount of liquid or aerosol insecticide with a C+C straw treats a specific site for a specific pest, and with little exposure to people and pets. The C+C straw on the nozzle of your B&G tank sprayer extends into narrow voids. It delivers liquid to the surfaces in the void. The straw on aerosol delivery systems can also extend into voids, and the spray droplets will spread to all surfaces.

Cockroaches in residential and commercial kitchens are the usual targets for C+C applications, but it shouldn't stop there. This treatment can be used to control many other household pests. Ants, carpet beetles, silverfish, spiders, and centipedes use the voids behind baseboards as travel routes and harborage. Baseboards close to beds also provide harborage for bed bugs. C+C straws (liquid or aerosol) deliver insecticide to the wall surface and the back of baseboards. Hotels may have the carpet extended up the wall to form the baseboard.

Application. Inserting the straw too deep behind the baseboard results in treating only the bottom—leaving the sides blank. Bed bugs and other insects walk or rest on these surfaces, and if treated, they'll pick up a lethal dose of insecticide. One pass with the liquid or aerosol straw along the top open edge of the baseboard is enough. Repeat application would run-off and pool at the bottom. This wastes time, chemical, and money—not what you want.

Carpet Baseboards. Treating carpet-style baseboards in hotel guest rooms is an important component of bed bug control. The carpet may be nailed or glued to the wall, and there is usually a gap at the top. C+C straws can easily be inserted in this opening for treatment. Insecticide residue on the wall (which may be covered with wallpaper) behind the carpet can kill the bed bugs using this site as harborage. Baseboards behind beds and nightstands are the most often infested. Lift the wall-to-wall carpet off the tacking strip and use the C+C straw to treat that bed bug and silverfish harborage. Other sites include baseboards in closets, and near luggage stands.

Push Click Use

The easy connecting, step reducing, money saving new ADU

From B&G Equipment Co.

Easy to use

The new B&G Aerosol Delivery Unit (ADU) attaches quickly and easily to your favorite aerosol. Go from 8 installation steps with the 'other system' to just 3 steps with the new ADU. The stress free installation is perfect for busy technicians who are short on time and have little patience for tricky procedures. You simply Push-Click-Use. There's no risk of cross threading, no squeezing clamps, or continuous turning of your aerosol. Just Push-Click-Use. The installation is so easy, no instruction DVD is needed.

5 great features you'll appreciate

You'll appreciate other great features in the ADU. Just a quick twist on the smooth operating valve activates your ADU. And you won't get pinched by the valve as you do with the 'other system'. The 6' coiled hose is tangle resistant. The actuator handle is light weight durable acetal to reduce fatigue. You even get a free deluxe holster with every ADU you purchase.

Look more professional

Your customer has an instant perception of you based on your appearance and the application equipment you use. When you use an aerosol without a professional delivery system, you send a 'do-it-yourself' message to your customer. Look professional while performing accurate crack & crevice treatments. Use the B&G ADU.

What PMPs are saying about the new ADU:

The ADU works flawlessly! I get leak-free operation and compatibility with all the major brands of aerosol manufacturers. I have already ordered more!
